EDITORIAL

The impact of the Corona pandemic has kept us all on edge longer than we imagined in the middle of last year. At the same time, there has been a massive increase in the amount of capital being invested in residential real estate. On the one hand, the "Wall of Money" profits from the continuing loose monetary policy of the major central banks, but on the other hand it also benefits from increasing risks and growing uncertainty in other asset classes. It is therefore all the more pleasing that residential investments have proven to be resilient to the crisis in recent quarters.

We have not only observed that experienced residential market investors have maintained, and sometimes even increased, their exposure, but we have also noted a significant increase in the number of investors. For example, several major investment managers, previously active only in commercial asset classes, have now invested in residential real estate or are currently in the process of setting up related funds and infrastructure. The realization is becoming increasingly widespread that, compared with other asset classes, residential investments are associated with comparatively low risk, secure cash flows and stable long term demand.

It is therefore not surprising that 2020 saw the all-time, second-best investment volume and that this positive trend has continued in the first quarter of the current year. The consequence of high demand is continued price increases for core products. This applies to both project developments and attractive existing properties in good locations. From the buyers' point of view, long-term security and substantial liquidity are the main factors in residential investment decisions. Relatively low yields, accepted as a logical consequence given the advantages outlined above, do not change this.

However, it is even more important to be able to back up investment decisions with well-founded and detailed information. Our customers responded positively to the initial report we published last year and it has shown that we have struck a chord with institutional investors and made an important contribution to greater transparency. We are therefore pleased to present the second edition of our German Residential Report and hope you enjoy reading it.

Berlin undisputed No. 1

RESILIENT RESIDENTIAL INVESTMENTS

- With an investment volume of €20.8 billion (30 residential units or more), 2020 saw the second-best result ever recorded. This exceeded an already strong previous year's result by a good 7 % and the long-term average by more than 36 %.
- Although the acquisition of Adler Real Estate by Ado Properties in the first quarter, which accounted for more than 25 % of the overall result, also contributed to this, the remaining transaction volume clearly demonstrates that residential investment markets are particularly resilient to the crisis and can certainly be regarded as winners in relation to other usage types.

DEMAND FOR PROJECTS HIGHER THAN SUPPLY

- Project developments have always contributed at least one fifth to turnover since 2015, but in 2020 the figure fell below this mark for the first time, at just over 15 %. However, this is primarily due to insufficient supply.
- In absolute terms, however, investments of over €3.1 billion were only marginally lower than the recent average.
- With a share of 58 %, existing portfolios therefore dominate the distribution of sales by asset class, which is not surprising in view of the Adler takeover.

VOLUME AND SHARE OF PROJECT DEVELOPMENTS

© BNP Paribas Real Estate, March 2021

MUCH ACTIVITY IN THE SMALL-SCALE MARKET SEGMENT TOO

- Large deals once again made the biggest contribution to total volume (61 %) not least as a result of the previously mentioned takeover. A total of 27 purchases in the triple-digit million range were recorded, which shows that big investors are also focusing on residential real estate.
- However, the fact that residential investment markets are of interest to a very broad range of investors, not least due to their resilience to the crisis, is reflected particularly in the great importance of the small-scale segment.
- Sales of up to €25 million account for around 15 % of transaction volume. With sales of almost €3.1 billion, this market segment broke the €3 billion threshold for the first time. Even more impressive, however, is the total number of transactions, which amounted to almost 290.

INVESTMENTS BY € CATEGORY

in %

© BNP Paribas Real Estate, March 2021

A-CITIES STILL IN DEMAND

- A-locations, generally the focus of particular attention from investors, accounted for around €7.7 billion. Although this represents a decrease of around 8 % compared with the previous year, the long-term average was exceeded by 13 %.
- The share of A-locations in total volume nationwide is 37 %, four percentage points lower than the 10-year average.
- The undisputed leader is once again Berlin, where sales of around €3.9 billion were recorded. As in previous years, this means that around half of the volume invested in A-cities is attributable to the capital, which remains the absolute top target for investors despite all the legislative turbulence.
- The cities of Frankfurt (€1.28 billion) and Hamburg (just over €1 billion), traditionally the focus of investors, also recorded transaction volumes in excess of €1 billion, confirming the ranking from the previous year.
- They are followed by Munich (€628 million), Düsseldorf (€575 million) and Cologne with €307 million. While Düsseldorf was able to increase its previous year's sales, Munich and Cologne recorded falls, for which insufficient supply is primarily responsible.

INVESTMENT VOLUME AND SHARE OF A-LOCATIONS

© BNP Paribas Real Estate, March 2021

- A good quarter of investment turnover in A-cities (€2.02 billion) is generated by development projects, on par with the long-term average. By contrast, this figure is only 15 % for Germany as a whole.
- Despite the significant rise in rents in recent years, investors continue to focus on the potential for value growth and long-term positive market development in the major German conurbations.

INVESTMENT VOLUME A-LOCATIONS

PRICES IN THE PRIME SEGMENT CONTINUE TO RISE

- Prices for multifamily homes have continued to rise due to strong demand. In the new build segment, they increased by an average multiplier of 1.5 in the A-locations at the peak of 2020. Over the past five years, prices in the major cities have risen by an average of around 23%. The growth in key B-cities is even more pronounced where an increase of almost one-third was recorded since 2015.
- Munich continues to be the most expensive city, with new build property multipliers peaking at 35. Stuttgart, some way behind in second place has a prime multiplier of 33.5, with the other top locations only just behind. Berlin has the strongest momentum, so it is likely that the capital will be able to catch up with Stuttgart in the foreseeable future.

PRIME MULTIPLIER NEW BUILDINGS IN A-CITIES 2020

NUMBER OF TRANSACTIONS AND Ø-NUMBER OF UNITS PER DEAL

RISING NUMBER OF TRANSACTIONS

- The ongoing rise in interest in residential investments is also reflected in the number of transactions. With 429 transactions (30 residential units or more) recorded nationwide, not only was the previous year's figure exceeded by 16%, but also set a new record. While major deals (such as the takeover of Adler Real Estate by Ado Properties) continue to make a significant contribution to turnover, market activity overall is on broader footing than a few years ago.
- As a result, the average number of residential units per transaction has also fallen noticeably, settling at a level of between 400 and 500 units in recent years. This trend is particularly evident if major deals of 5,000 residential units or more are disregarded. The average number of residential units in the remaining transactions was just 218 in 2020, around 35% lower than the average for the past 10 years.

OUTLOOK

Despite a difficult macroeconomic environment, residential investment markets are developing positively. Unlike commercial real estate, this asset class benefits from significantly lower rental default risks. On the other hand, demand from occupiers remains high and is still encountering a shortfall in supply, particularly in metropolitan areas.

With this in mind, it is not surprising that purchase prices, particularly in the core segment, continued to rise in the pandemic year of 2020. For the current year, purchase prices are expected to remain stable for the most part, yet slightly higher prices cannot be ruled out in isolated cases.

In 2021, it seems likely that the result will be at least in line with the long-term average.

A-CITIES CONTINUE TO SHOW HIGHEST RENTAL MOMENTUM

- Germany's A-cities continue to show the strongest momentum for growth: On average, rents in existing stock have risen by 35 % since 2014, while an average of +25 % is posted for the cities with no wider administrative district.
- In the top 7 cities, rents for existing properties are now all above €11/m². Munich continues to lead the way by a wide margin, with apartments on offer for a median of just over €19/m².
- Berlin recorded the highest rental growth since 2014 with +54 %, followed by Schweinfurt (+48 %) and Heilbronn (+46 %). With a median asking rent of €11.05/m², Heilbronn clearly outperforms major cities such as Essen, Dortmund and Dresden.

TOP 5 MOST DYNAMIC CITIES

MEDIAN RENT EXISTING STOCK AND RENTAL GROWTH SINCE 2014 BY CITY CATEGORIES

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

THE GAP IS CLOSING

- Apart from the A-locations, which show well above-average rental growth of 35 %, the gap is closing in terms of rental growth. Both large and mid-sized cities show a noticeable increase of 26 %. Student cities follow close behind with +25 %.
- Rents in existing stock in student cities remain well above those in large and medium sized cities.

A-CITIES STILL BY FAR THE MOST EXPENSIVE

- Asking rents in the new build segment are again by far the highest in A-cities in 2020. On average, the median rent for new builds are at €16.55/m². In the upper segment, the figure is €21.45/m².
- Munich continues to lead in terms of median new build rents, with €20.90/m², ahead of Stuttgart with €18.10/m². Berlin (17.30 €/m²) has pushed ahead of Frankfurt (€17.00/m²).
- In the upper new build segment, rents in Munich remain unrivalled at €25.40/m². Frankfurt (€24.00/m²) is followed by Berlin (€23.30/m²).
- Rents in student cities remain high. Both in the middle and upper segments, significantly higher rents are being sought in new builds than in the large and medium-sized cities surveyed. This is due, among other things, to the high number of single and small households.
- In the major cities, rents for new builds have risen by an average of a further 3.5 % to €11.60/m². Of the 19 cities surveyed, Karlsruhe (+12 %), Duisburg (10 %) and Leipzig (+8 %) recorded the highest annual growth in 2020.

MEDIAN RENT AND UPPER RENTAL SEGMENT NEW BUILDS BY CATEGORY

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- In the medium-sized cities, too, rents for new builds have risen further to the current level of €10.15/m² on average. With annual growth of 2.8 % and 2.7 % respectively, they have shown the greatest consistency since 2018.

MEDIAN RENT NEW BUILDINGS IN A-LOCATIONS

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

RENTAL PRICE GROWTH IN NEW CONSTRUCTION CONTINUES

- Rental prices in the new build segment continued to rise in 2020, a year dominated by Corona – even accelerating in pace. For A-cities, an increase of 5 % is reported for 2020 following a plus of 3 % (2019 compared with 2018).
- Berlin is by far the most dynamic city. Since 2014, asking rents in the new build segment in the capital have risen by 64 % to the current level of €17.30/m². However, it remains well below the level of Stuttgart and Munich.
- While there are signs of stabilization in asking rents in Düsseldorf in 2020, a further increase is being recorded for all other A-locations. Berlin (+13 %) leads the way, ahead of Cologne (10 %) and Hamburg (6 %).

RENTAL GROWTH IN EXISTING AND NEW BUILDS ALMOST IN STEP

- The shortage of supply, dominating the market in most of the cities surveyed, has led to significantly rising rents in both existing and new builds. Since 2014, asking rents in existing stock have risen by an average of 25 % to the current level of €8.60/m².
- The intensity of demand is reflected above all in asking rents for new builds, which have risen by 24 % since 2014 to the current level of €11.30/m². Tenants are prepared to keep up with rent increases in the upper segment as well, since supply in this premium category is also barely able to keep pace with demand.

MEDIAN RENTS 2020 AND GROWTH SINCE 2014: EXISTING STOCK VS. NEW BUILDINGS

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

TREND TOWARD SMALL HOUSEHOLDS CONTINUES – DEMAND REMAINS HIGH

- The number of households in Germany increased significantly between 2014 and 2020, growing 4.4 % to a good 41.3 million households in this period. Demand for housing has thus effectively increased by 1.75 million units.
- In parallel, housing stock has grown by 1.5 million units, leaving, in purely arithmetical terms, a shortfall of over 250,000 residential units. What is encouraging from this purely quantitative perspective is that the supply shortage, which in previous years amounted to more than 400,000 units nationwide, is gradually being reduced. The efforts of many municipalities and local authorities to support construction activity in the residential segment are bearing fruit, if nowhere near to a sufficient degree.
- The shortage of supply is reflected in the low vacancy rate of 2.8 % nationwide and below the fluctuation reserve of around 3 %.
- It should be noted that these are market-active vacancies, i.e., apartments that are ready for follow-up leasing. However, overall analysis of the housing stock also includes units in need of major refurbishment that are not available to the market in the near future. It should also be kept in mind that

the quality of a not inconsiderable proportion of the housing stock is not up to date.

- German cities are very attractive places to work and live and the degree of urbanization has risen steadily to 77.4 % by 2019. Internal migration directed toward the major cities is likely to continue, but although the momentum in the core cities might slow down, important metropolitan regions will clearly continue to gain.
- The trend toward 1 and 2 person households, observable for years, has continued to consolidate. In 2019, 75.5 % of all citizens lived in such a small household. This trend is forecast to continue: The share of single-person households is expected to increase from 42.1 % currently to 45.3 % in 2040.
- The combination of migratory gains and an increasing number of small households will continue to put pressure on housing markets, especially in Germany's A-locations. With the exception of Düsseldorf, vacancy rates are already below 1 %.

DEVELOPMENT OF PRIVATE HOUSEHOLDS AND HOUSING STOCK

SHARE OF SINGLE-PERSON HOUSEHOLDS

© BNP Paribas Real Estate, March 2021; Source: Statistisches Bundesamt

CONSTRUCTION ACTIVITY IN A-CITIES INSUFFICIENT

- Construction activity remains insufficient in most A-locations. Although a majority of cities have now launched housing construction programs with clear targets of residential units to be built annually in view of the stark supply bottleneck that has existed for years, these targets are often missed by wide margins or only recently achieved.
- The "backlog" that has built up over years is therefore being reduced only very slowly or not at all. There is a gap between new construction and demand, and forecasts point to this situation becoming more entrenched. The exception is Hamburg, which has had a highly successful housing construction program for years.

AVERAGE LEVEL OF NEW BUILDS AND FUTURE DEMAND

© BNP Paribas Real Estate, March 2021; Source: Statistisches Bundesamt; IW Köln

LOW VACANCY RATES KEEP RENTS UNDER PRESSURE

- Unsurprisingly, very low vacancy rates are keeping pressure on rent levels high.
- The highest asking rents continue to be seen in Munich, Stuttgart and Frankfurt where the vacancy rate has been below 1 % for more than six years. Despite the shortage of supply being well acknowledged and seen by both the business community and politicians as a major obstacle to further growth and successful urban development, it has not yet been possible to raise construction activity to a level that would provide relief on the supply front.
- Of the three top markets, only Stuttgart is showing signs of a slowdown in the rise of prices for existing buildings. As far as rents for new builds are concerned, there are many indications of flattening out in Stuttgart. The situation is different in Munich and Frankfurt, where the pressure on asking prices

will not ease until there is a noticeable increase in vacancy rates.

- Berlin, which for many years was characterized by a balanced housing market, is preparing to join the top three. This is reflected in the continued low level of construction activity, the falling vacancy rate, the rising rents despite the rent cap, and the fact that many new Berliners are accustomed to the prices of other international metropolises such as London and Paris, both still at a quite different, much higher level.
- Despite the low vacancy rate of 0.5 %, pricing in Hamburg is relatively moderate. The substantial new construction activity, immediately absorbed by the market, is primarily taking pressure off rents in existing stock.

MEDIAN RENTS VS. VACANCY RATES IN A-CITIES

© BNP Paribas Real Estate, March 2021; Sources: IDN ImmoDaten GmbH; CBRE-empirica-Leerstandsindex

OUTLOOK

Nationwide, residential markets are very stable and, in many places, showing clear and, crucially, sustainable growth. In A-locations, the trend is clearly upwards, and even in large, medium-sized and student cities, rising rents have been consistently recorded since 2014. 2020, a year dominated by the Corona crisis, has seen a further increase in asking rents across the board.

A temporary levelling off in rental development cannot be ruled out, as lockdown is generally restricting people's mobility. The parameters shaping the German housing market; urbanization, the trend toward smaller households and too little construction activity show no sign of changing. The supply bottleneck will remain market dominant.

In the coming years, demand for residential space could increase further as a result of changes in living and working habits – irrespective of population growth or migration gains. If working from home becomes more widely accepted after the pandemic is over, this could create additional room or living space needs for many households. Many are likely to seek a better spatial separation of work and private life, even within their own four walls.

Vacancy rate 2019

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH; Statistisches Bundesamt; CBRE-empirica-Leerstandsindex

- Rents of existing and new builds rising strongly
- Accelerated momentum in new build segment since 2019 by +13 % to €17.30/m²

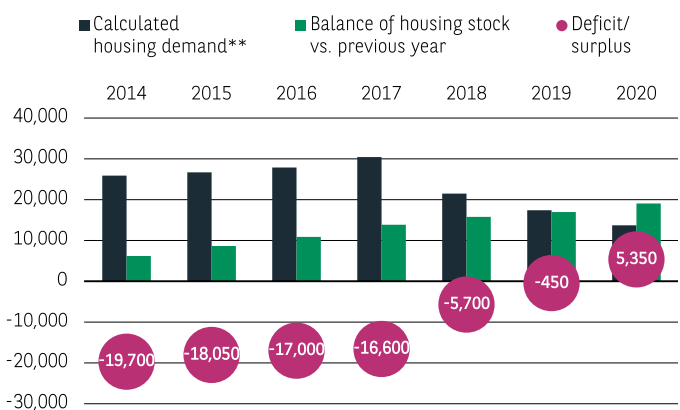

- Vacancy rate stable at just 0.8 % since 2018
- No expansion in housing supply despite rising construction activity

- Construction activity increased, but nowhere near enough
- Between 2014 and 2019, almost 223,000 new residents, but only 70,250 new apartments

- Calculated new housing demand in 2020 with surplus for the first time after many years of deficit
- Deficit (2014 to 2020) totals around 72,000 residential units

*The Berlin residential market was subject to special external influences in 2020. Please also refer to the "Methodological notes" on page 58.

- Housing prices in new construction continue to rise sharply
- Price level sustainable in the long term and moderate in relation to other A-locations at €6,090/m² (new build)

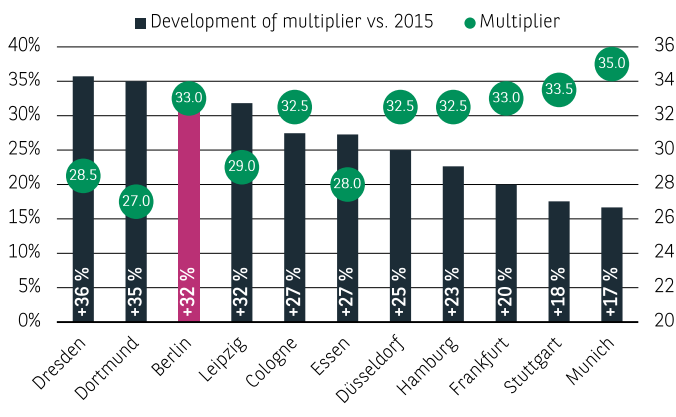

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Germany's No. 1 investment location also in 2020
- Despite all the discussion about the Berlin rent cap, volume again around €4 billion (residential portfolios over 30 units)

© BNP Paribas Real Estate, March 2021

- Development of prime multiples in the capital significantly more dynamic than in other A-cities
- At +32%, comparable with many B-cities

© BNP Paribas Real Estate, March 2021

- Net prime yield down further to currently 2.65 %
- Since 2014, strongest yield compression of all A-cities by 110 basis points

© BNP Paribas Real Estate, March 2021

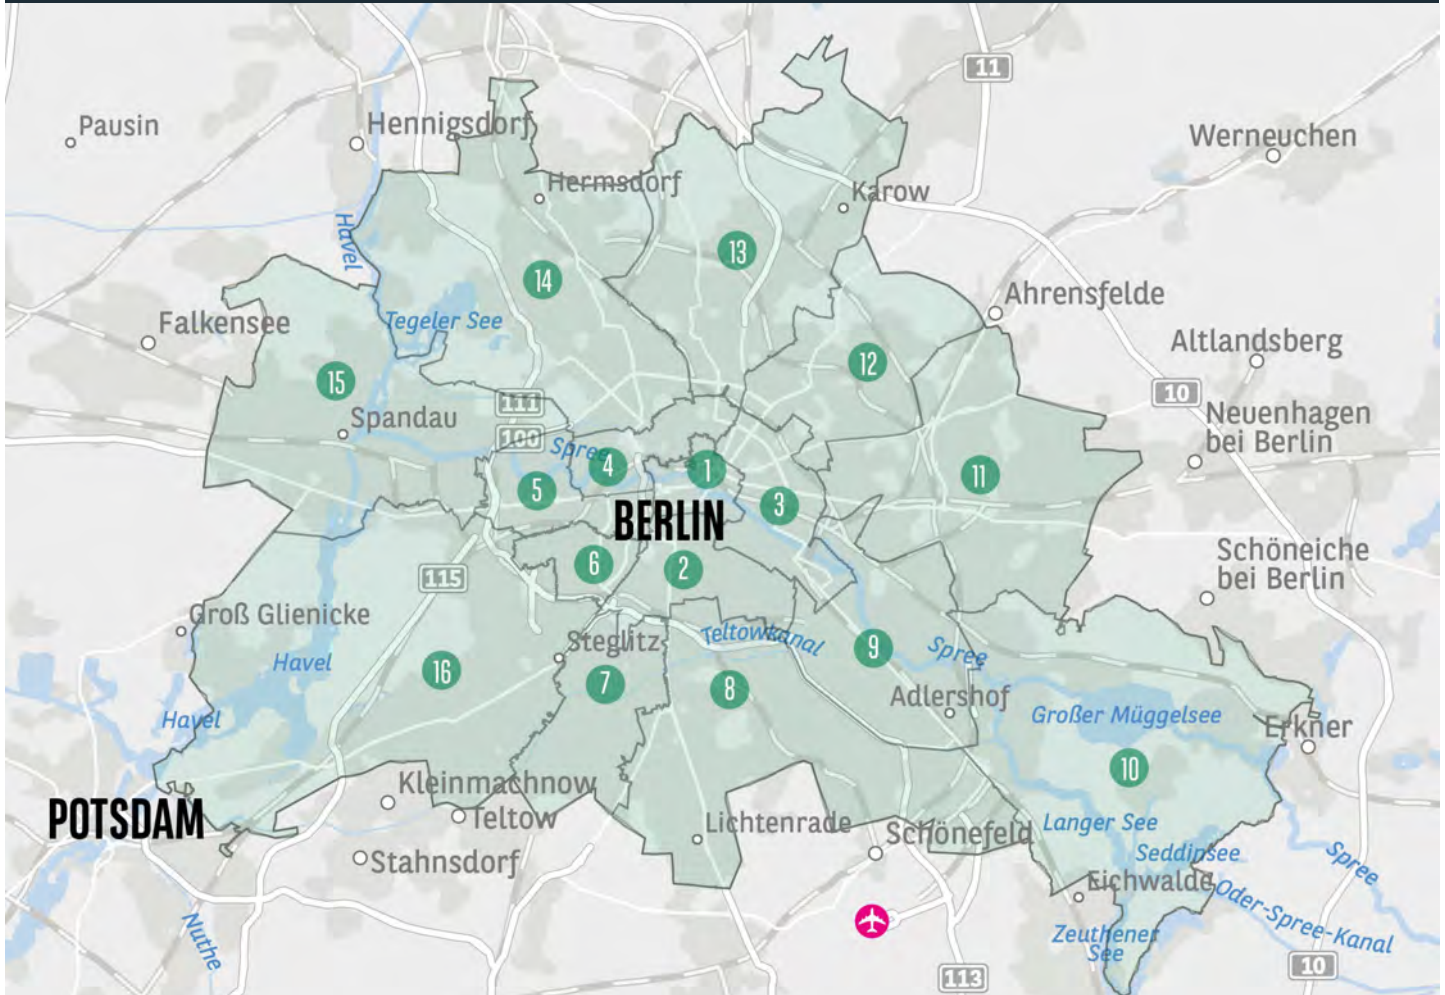

OUTLOOK

The Berlin housing market remains on the course set in 2014. Rents and purchase prices continued their ongoing upward trajectory in 2020, and a reversal is not expected.

Although construction activity since 2016 has exceeded the Senate's target of at least 10,000 new residential units per year, there are no signs of relief regarding supply. The vacancy rate remains below 1 %, and excess demand will continue to dominate the market in the coming years. For one thing, the backlog of supply built up over years will only be reduced very slowly despite the increase in construction volume – quite aside from the possible influence of the rent cap on construction activity – and for another, Berlin will continue to expand its international appeal as an attractive place to live and work. The commissioning of the Tesla plant in Fürstenwalde alone will contribute to this.

The German capital will remain Germany's most dynamic residential market and gradually close the outstanding gap with Paris and London.

OUTLOOK

The dynamism of Cologne's residential market is set to continue. The vibrant cathedral city has been able to attract around 63,500 new residents between 2013 and 2020. The number of households has risen by a good 33,000, and there is no end in sight to this story of growth. The current population forecast sees a further increase of 6.3 % to 1.15 million inhabitants in 2040.

The pressure on demand will remain accordingly high, and only gradual relief can be expected in supply. Although the Cologne Housing Alliance is aiming for an annual construction output of up to 6,000 apartments per year, the city is still miles away from this, with an average of 2,800 apartments now. The Housing Construction Pact 2025 concluded with Vonovia SE in September 2020, guaranteeing the construction of 750 new apartments by 2025, will only make a marginal contribution to increasing supply.

Rental and purchase prices in Cologne will continue to move upwards. The cathedral city is and will remain highly attractive as a place to live and work.

- Rents in existing stock 28 % higher than in 2014
- Particularly in the upper new build segment, rental price development remains dynamic in 2020 at +14 % (€17.85/m²)

- Vacancy rate stable at 1.4 %
- Great market stability is reflected in moderate development of supply (2013-2018: from 1.6 % to 1.4 %)

- Construction activity constant around 2,000 units per year
- Political target of creating 3,000 residential units p.a. on a sustainable basis is missed

- Calculated new housing demand achieved since 2018
- Deficit (2014 to 2020) adds up to around 2,700 residential units and is therefore relatively modest

- Residential prices remain on growth track
- After moderate increase of 3 % in 2019, price growth accelerates again to +10 % in 2020

- Investment location in demand: 5th place among A-cities
- Annual investment volumes consistently above €400 million since 2017

© BNP Paribas Real Estate, March 2021

- Prime multiplier very buoyant at +25% compared with 2015 and on a par with Cologne and Hamburg at 32.5
- Most dynamic A-location after Berlin and Cologne

© BNP Paribas Real Estate, March 2021

- Net prime yield continues to decline at now 2.70 %
- Accelerated yield compression in 2020 with minus 10 basis points after minus 5 basis points in 2019

© BNP Paribas Real Estate, March 2021

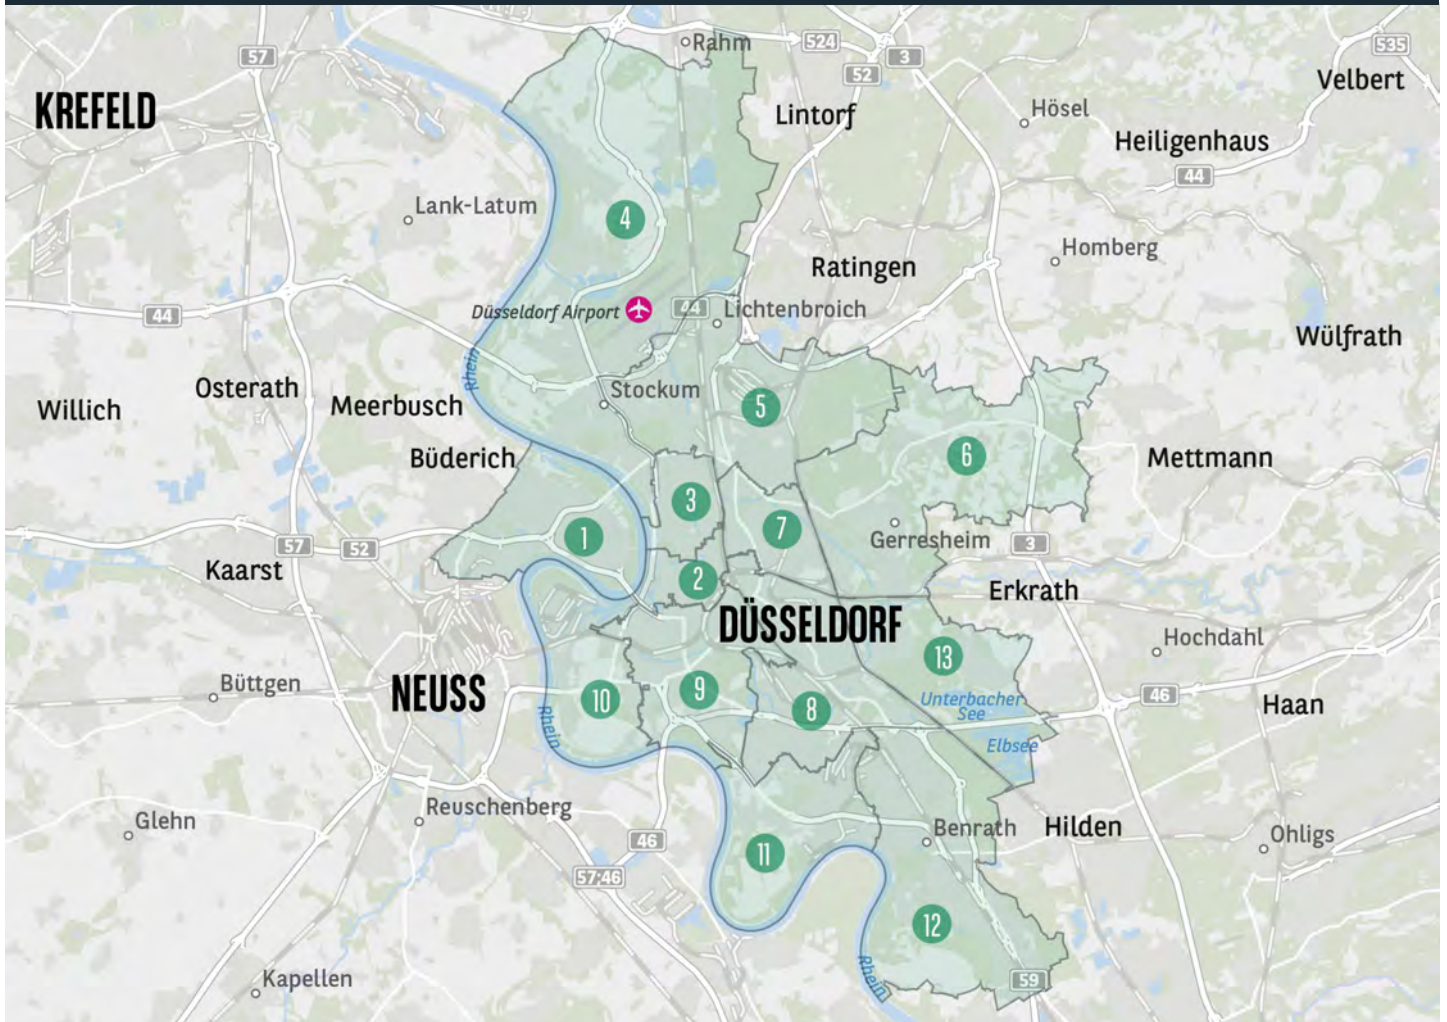

OUTLOOK

The residential market in the capital of North Rhine-Westphalia will continue to be characterized by low vacancy rates and high occupier demand in the coming years. The trend of an increasing population and rising household numbers, observable for years now, will continue, because Düsseldorf is and will remain an extremely attractive place to live and work. The city of Düsseldorf forecasts a population growth of +40,000 inhabitants in the next ten years for an increase in the number of inhabitants to 660,000 by 2030. Simultaneously, the number of jobs is expected to increase by 60,000.

Düsseldorf has set itself the goal of sustainably creating 3,000 apartments per year. This target will continue to be missed, so the pressure on rents and purchase prices will remain. The residential market will continue its dynamic development at a high level.

The overall limited reserves of building land will primarily shift focus onto the development of mixed neighbourhoods, consolidation, conversions and high-rise developments.

- Investment volume in larger residential portfolios (30 units or more) in new spheres in 2019 and 2020: each over €1 billion

© BNP Paribas Real Estate, March 2021

- Growth of prime multiples comparatively moderate at +20 % compared with 2015
- Already very high price level prevents stronger increase

© BNP Paribas Real Estate, March 2021

- Net prime yield currently only 2.65 %
- Accelerated yield compression in 2020 with -15 basis points

© BNP Paribas Real Estate, March 2021

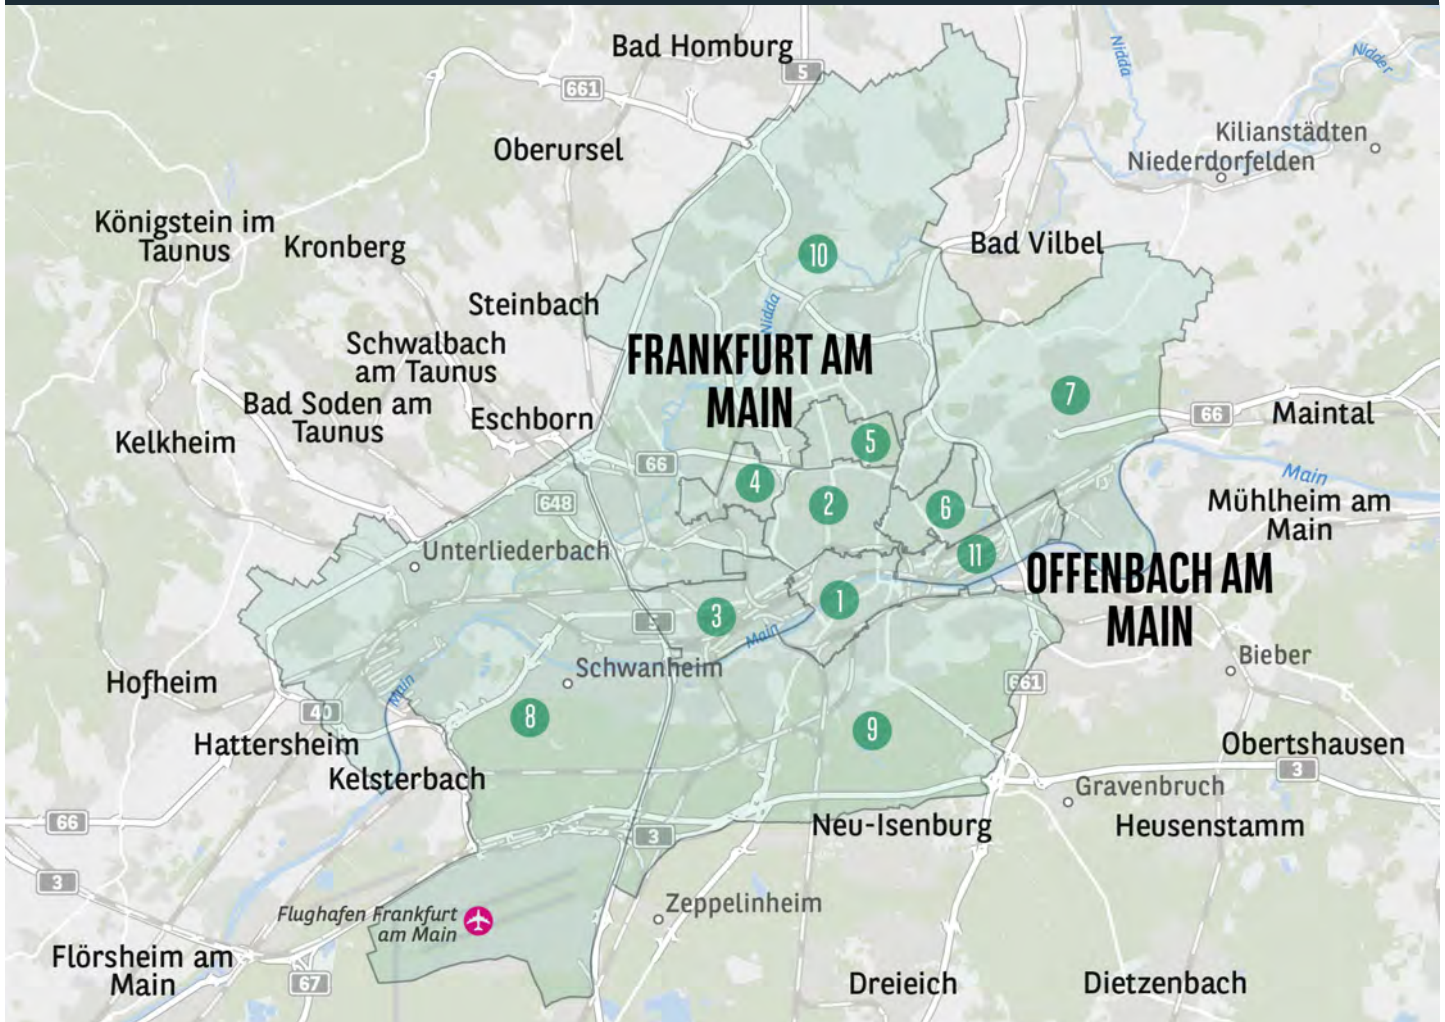

OUTLOOK

Frankfurt will continue to occupy a place in the leading field of the top locations in the future. Rental and purchase prices are traditionally very high, which is due not least to the great international appeal and magnetism of the financial centre as a place to live and work. In addition, the core city of the Rhine-Main metropolitan region has managed for years to steadily and successfully increase the standard of living and overall quality of stay in the city.

Demand pressure on the residential market will remain, as population forecasts are clearly indicating growth and the upheavals in the international banking sector in the wake of Brexit have still not come to an end. For example, at the start of 2021, the ECB again warned that some U.K. financial institutions that wanted to do business in the EU after Brexit still did not have enough local employees. Frankfurt, which has moved from 16th to 9th place among the world's most important financial centres in the latest Global Financial Centres Index (putting it ahead of Zurich, Paris and Luxembourg), could continue to benefit from Brexit.

The Frankfurt residential market will continue to display vibrant growth and therefore supply shortages and rising prices will remain characteristic of Germany's banking capital.

- Rents in existing stock up 3 % to €12.40/m² in 2020
- With a median rent of €14.30/m², Hamburg is in the midfield of A-cities

- Vacancy rate relatively stable at around 0.5 % since 2017
- Among A-locations, only Munich and Frankfurt have lower vacancy rates of around 0.2 % each

- Construction activity has increased significantly
- Only Berlin saw more housing completions in 2019 than this Hanseatic city

- Calculated demand for new housing will be exceeded
- However, deficit (2014 to 2020) still totals around 7,800 units

- Housing prices continue to rise
- Median price for new apartments at similar level to Berlin and Düsseldorf

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Investment turnover of a good €1 billion
- Second year in succession that the billion threshold has been exceeded

© BNP Paribas Real Estate, March 2021

- Prime multiplier now at 32.5
- With an increase of just under a quarter in the last five years, Hamburg is in the midfield of the A-locations

© BNP Paribas Real Estate, March 2021

- Net prime yield currently at 2.70%
- Compared with the very top locations, the Hanseatic city is still relatively affordable

© BNP Paribas Real Estate, March 2021

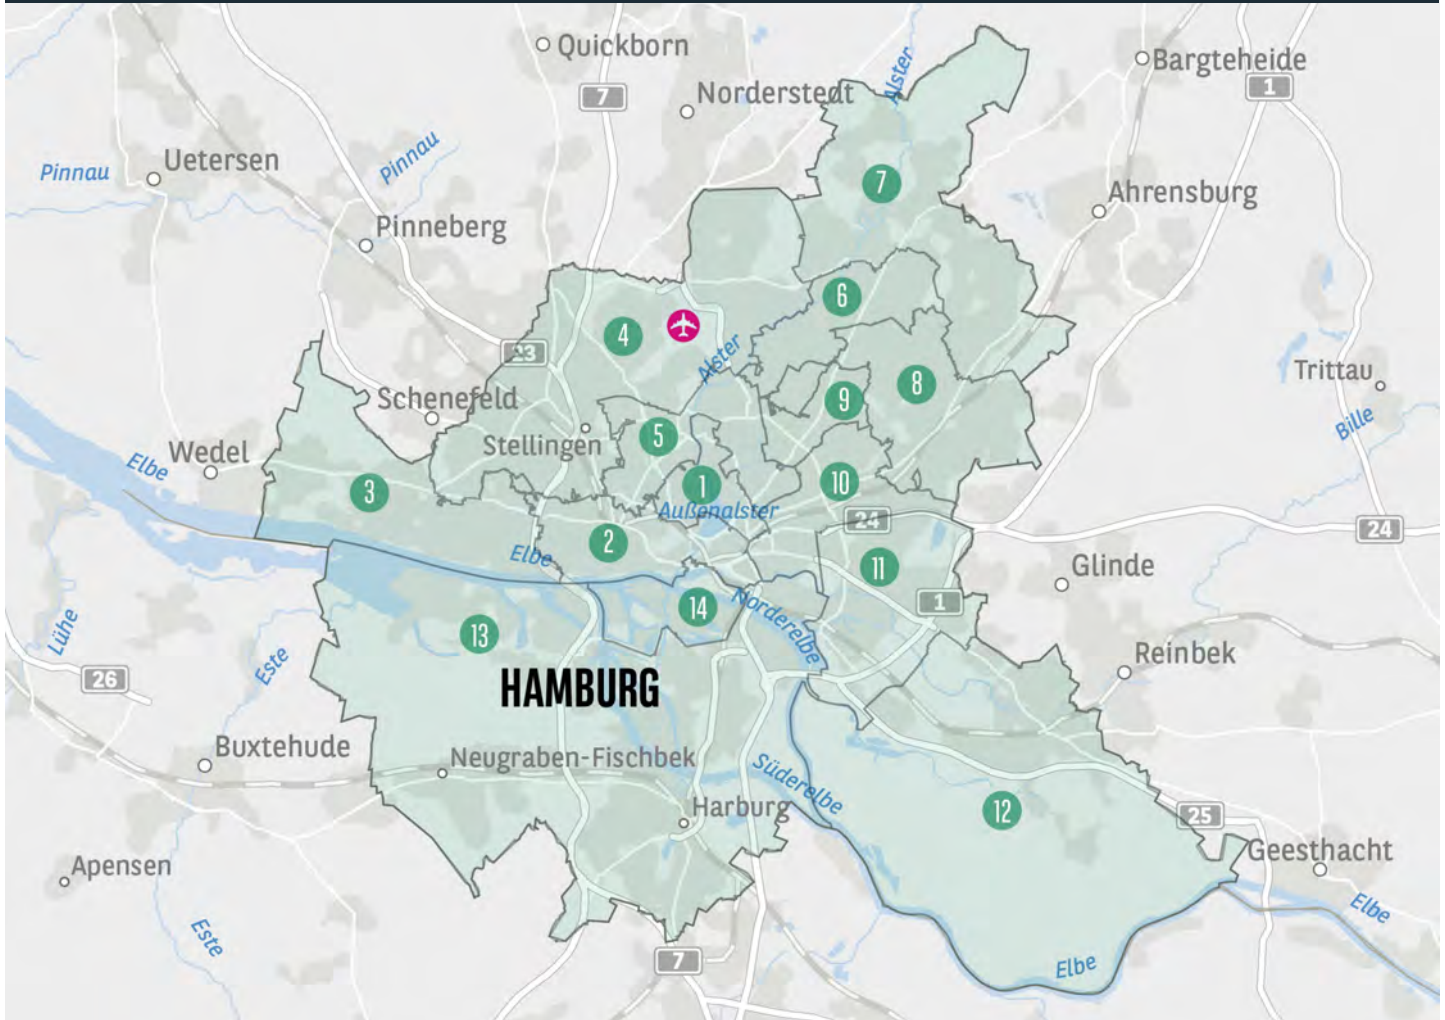

OUTLOOK

Hamburg is undisputedly one of the most attractive cities in Germany and has many high-quality residential neighbourhoods in a wide variety of styles. Combined with its economic strength, the Hanseatic city is accordingly a sought-after residential location for many people, which is reflected in the consistently growing population.

This encouraging trend is also reflected in the development of rents and purchase prices. However, increases in several market indicators were somewhat more modest than in some of the other particularly desirable metropolitan areas.

Due to the significant increase in construction activity over the past two years, the supply bottleneck has not intensified, though nor has a noticeable easing yet set in. In this light, everything points to a continuation of stability marked by comparatively moderate price rises.

- 35-fold Prime multiplier for new construction
- Below-average growth since 2014 (17 %) due to existing very high price level

- Net prime yield down 15bp to 2.55 %
- Munich remains most expensive location ahead of Berlin, Frankfurt and Stuttgart

© BNP Paribas Real Estate, March 2021

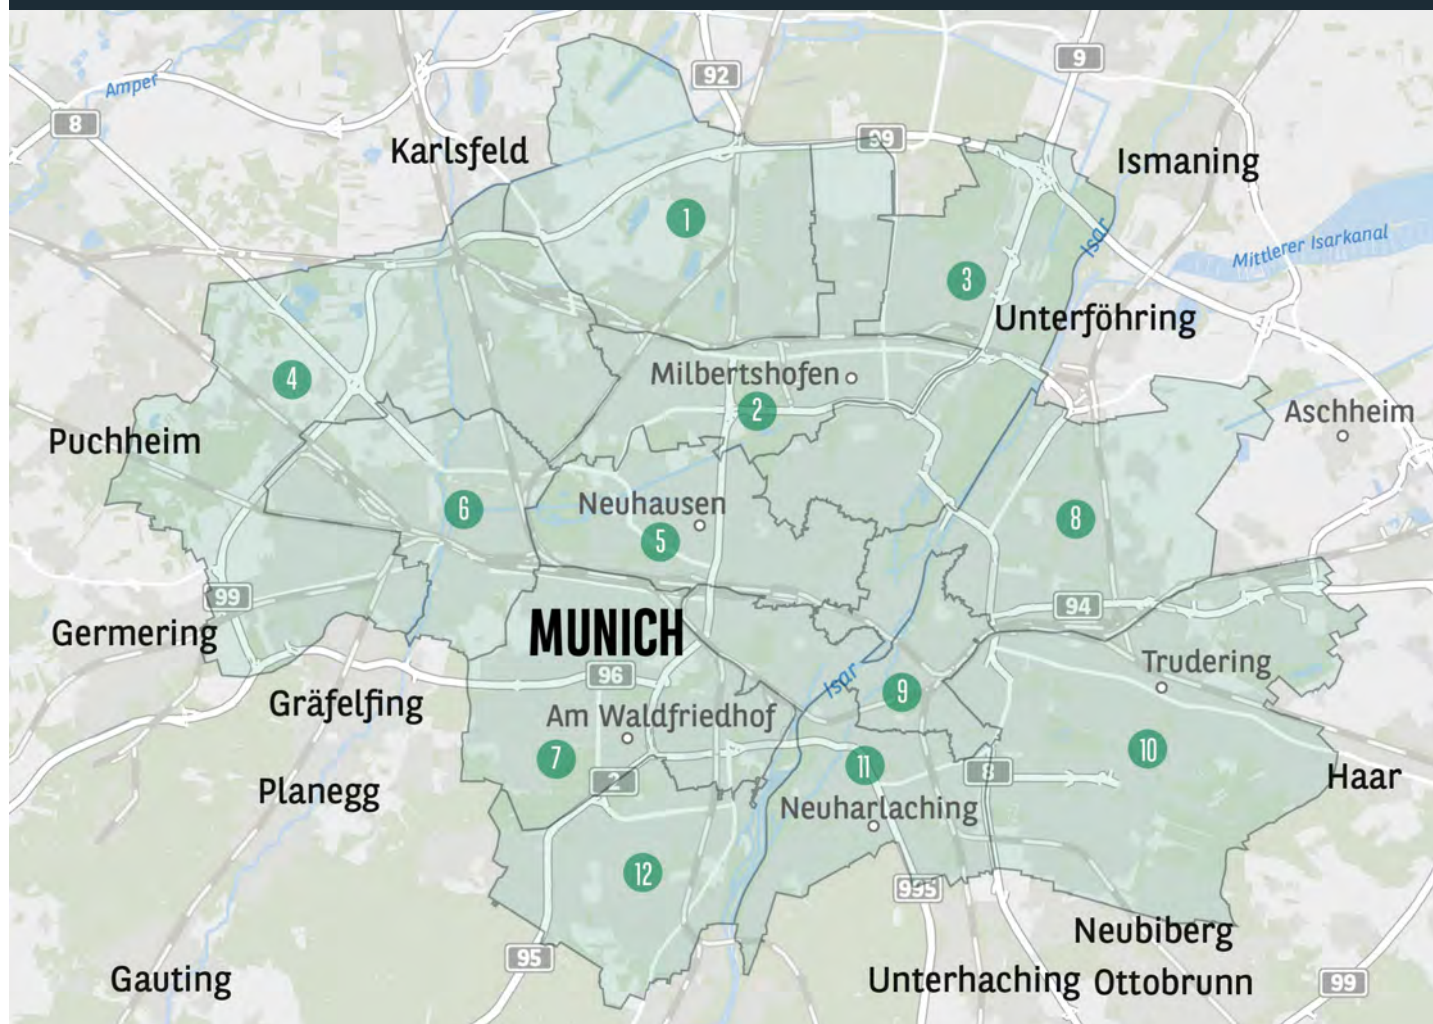

© BNP Paribas Real Estate, March 2021

OUTLOOK

The situation on the Munich housing market is and remains very tight. Despite a slight increase in the number of housing completions in recent years, this situation will not change in the medium term. One indication of this is the continual rise in rents, which once again increased noticeably in the Corona year of 2020. Whether rents will continue to climb therefore depends less on the tightness of supply and more on the economic viability of rents for large sections of the population.

Munich is also the undisputed leader among German cities in terms of prices. Here, however, growth has slowed noticeably in recent years. With current net prime yields of only 2.55 %, the air for further price increases is likely to become thinner in the coming years. At the same time, it should be noted that due to the market situation sketched above, hardly any other city has such good prerequisites for stable rental and purchase prices in the long term.

- Median rent in existing stock rise to €14.65/m²
- Slower price growth in new builds (+1 % compared with 2019); median of €18.15/m², nevertheless in top group of A-cities

- Vacancy rate stabilizes at 0.5 %
- Third-lowest vacancy rate among A-locations after Frankfurt and Munich

- Construction activity below average at 950 units
- Alliance for Housing target of at least 1,800 units p.a. in 2020 clearly missed for the first time

- Calculated demand for new housing only recently met
- Deficit has added up to around 9,200 residential units since 2014 and is only gradually being reduced

- Housing prices (new buildings) continue to grow vigorously
- At +84 %, stronger growth than Berlin; at €7,715/m², second most expensive A-location after Munich

- Investment location 2020 with very low result
- Lack of product limits investment turnover to €30 million; Stuttgart therefore in 7th place of A-cities

© BNP Paribas Real Estate, March 2021

OUTLOOK

Stuttgart has traditionally been one of the most expensive residential locations in Germany. The scarcity of supply is glaring.

The driving factors from the demand side are the economic strength of the metropolitan region and its core city, as well as the very high standard of living. Dominating supply-side factors are the confined urban area, exacerbated by the city's well-known valley location. This situation will continue and the pressure on prices will remain, especially as the Stuttgart Alliance for Housing's target of at least 1,800 new builds per year has been missed for the second year in succession.

However, further rent and purchase price increases are likely to be comparatively moderate. On the one hand, Stuttgart is already at an elevated starting level and, on the other, there have been signs of a slowdown in rental and purchase price growth since 2019. In the upper new build segment, there are signs of flattening out at the current level of €22.40/m².

- Median rent in existing stock at €7.65/m²
- Rise of 34 % since 2014; strongest growth of the B-cities covered

- Vacancy rate stable at 2.5 %
- Housing supply relatively low compared with B-locations, but virtually unchanged for five years

- Construction activity has risen noticeably since 2017
- Between 1,300 and 1,400 new apartments completed per year in each of the last few years

- Calculated new housing demand exceeded
- However, the deficit (2014-2020) adds up to a total of around 2,200 residential units

- Median apartment price (new buildings) at €3,245/m²
- Lowest condominium prices of the B-locations considered and comparatively moderate growth since 2014 (+22 %)

- Investment turnover comparatively low
- Average investment volume of just under €180 million per year since 2014

© BNP Paribas Real Estate, March 2021

- Prime multiplier for new builds at 27.0
- Relatively low purchase prices, but noticeable catch-up in recent years

- Net prime yield currently at 3.25 %
- Strongest yield compression of all B-cities; minus 160 bp since 2014

© BNP Paribas Real Estate, March 2021

© BNP Paribas Real Estate, March 2021

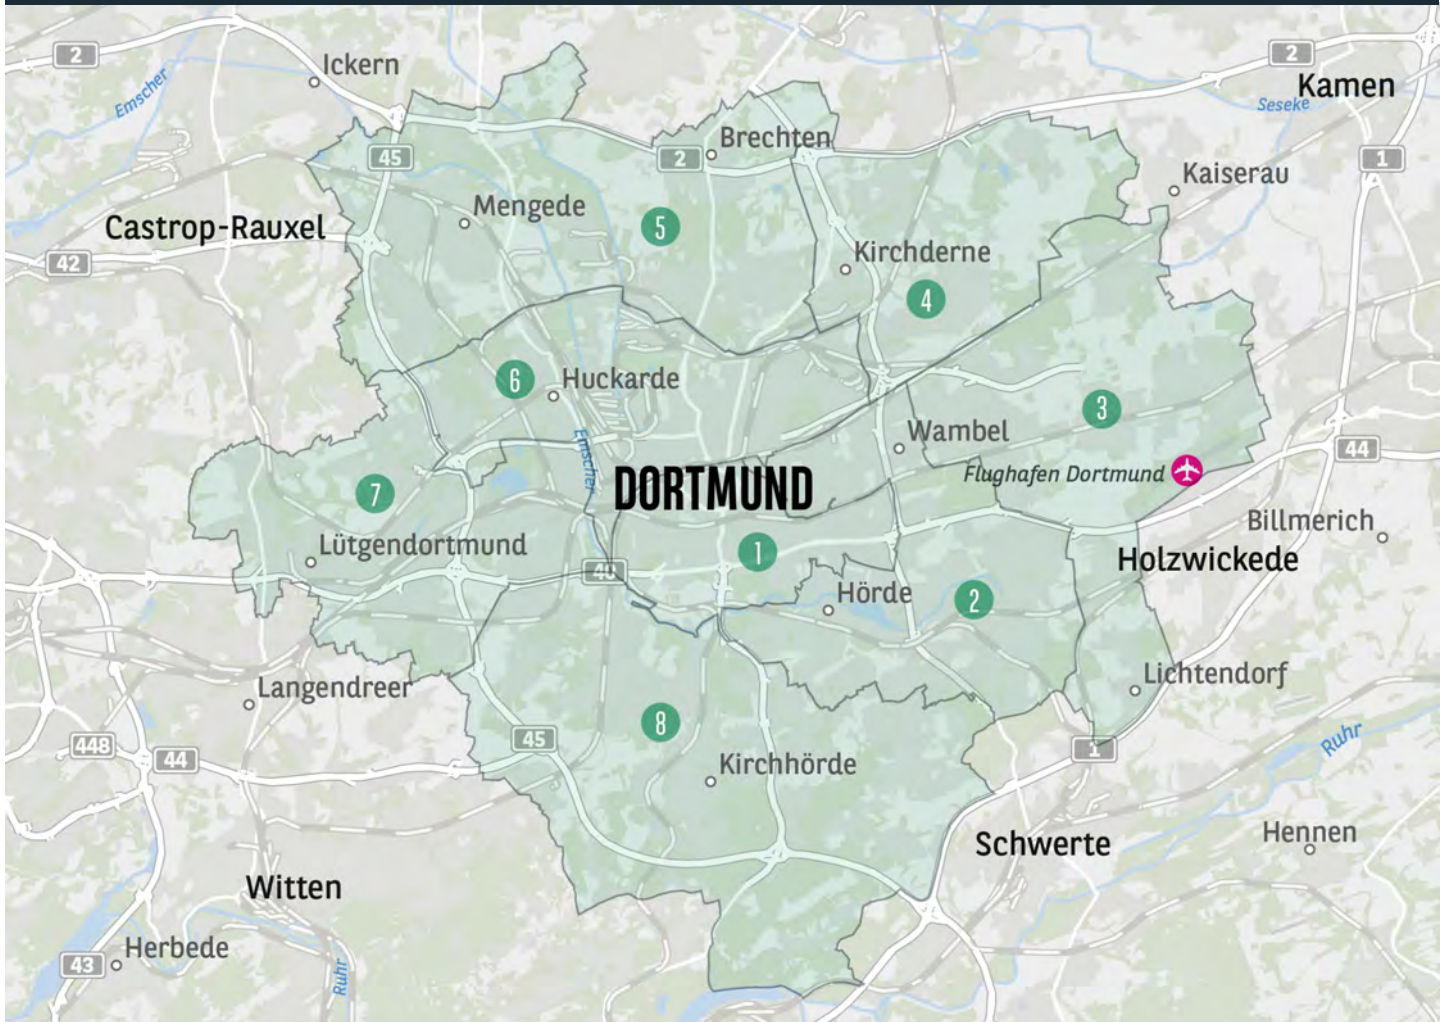

OUTLOOK

In the balance between supply and demand, the Dortmund housing market has been somewhat stable for several years. Increased construction activity has prevented further contraction in supply over the last few years, with the result that the vacancy rate of 2.5 % is only slightly below the usual fluctuation reserve of around 3%.

Development of rents in existing stock is characterized by above-average momentum compared with other B-cities. Against this backdrop, it is not surprising that prices for multi-family houses have risen significantly and Dortmund has noticeably narrowed the gap to the other B-locations. This trend is likely to continue in coming years.

The situation is different for condominium prices where Dortmund brings up the rear among the B-cities surveyed and has shown less momentum by comparison.

- Housing prices continue growth trend
- At €4,370/m² (new construction), the level in the Saxon state capital is slightly above that of Leipzig (€4,315/m²)

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Investment volume in the Corona year of 2020 up by just under 19 % to €574 million for residential portfolios over 30 units
- Since 2017, great stability: volume p.a. at approx. €500 million

- Prime multiplier above level of Essen and Dortmund
- Dresden leads in growth of prime multiplier: +36 % to 28.5 compared to 2015

- Net prime yield currently at 3.15 %
- Yield compression in 2020 at an even faster pace: -20 basis points

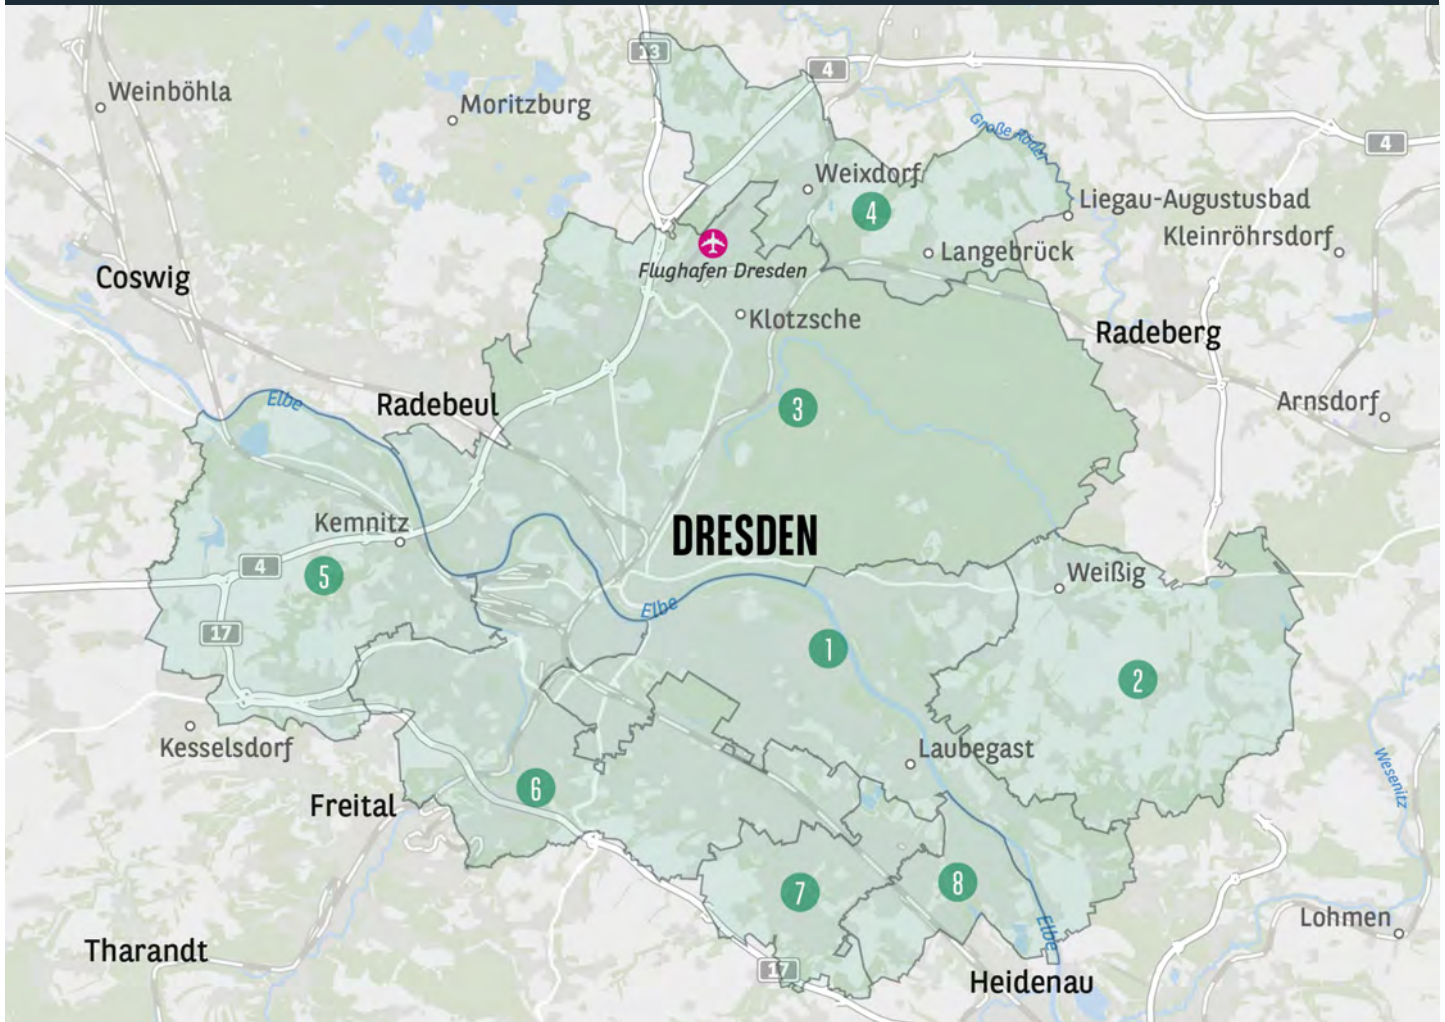

OUTLOOK

The outlook for the Dresden housing market is good.

The Saxon state capital has a strong economy and an internationally recognized research environment that offers potential for further growth. Furthermore, Dresden has the only university of excellence in eastern Germany. Dresden's appeal as a place to work and live is reflected in the population figures, which have been rising for years, as well as in the city's current population forecast, which predicts a further increase of +3.1 % between 2020 and 2035.

The trend towards growth in rental and purchase prices will continue, as there is unlikely to be any extensive expansion in supply despite the healthy overall level of construction. However, the pace of growth could be somewhat more moderate for the time being. In the medium to long term, Dresden has substantial potential for further price increases given its low starting level.

- Continuous rental growth in existing stock; new builds, currently stabilizing after strong growth at €11.05/m²

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Vacancy rate at 3.1 % for second year in succession
- Very modest but sustained vacancy reduction since 2013

© BNP Paribas Real Estate, March 2021; Source: CBRE-empirica-Leerstandsindex

- Construction activity since 2017 relatively constant
- City of Essen anticipates housing demand of 16,530 units for the period 2017 to 2030 (1,271 per year)

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Calculated new housing demand achieved since 2017
- Deficit (2014 to 2020) amounts to about 4,100 residential units, which is comparatively moderate

*BNPPRE calculation based on annual net population

© BNP Paribas Real Estate, March 2021; Source: Statistisches Bundesamt

- **Housing prices (new builds):** since 2014, increase of 33 % to a new level for Essen beyond the €3,500/m² mark
- In 2020 price stabilization in the top segment

- With an **investment volume** of €305 million on a par with Cologne (€307 million) and far ahead of Stuttgart (€30 million)
- High transaction volume underlines market attractiveness

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- **Prime multiplier** increased by 27 % since 2015 and so in the midfield of locations surveyed
- Prime multiplier lower only in Dortmund

- **Net prime yield** down 95 basis points since 2014 to current 3.15 %
- Accelerated yield compression in 2020: -10 basis points

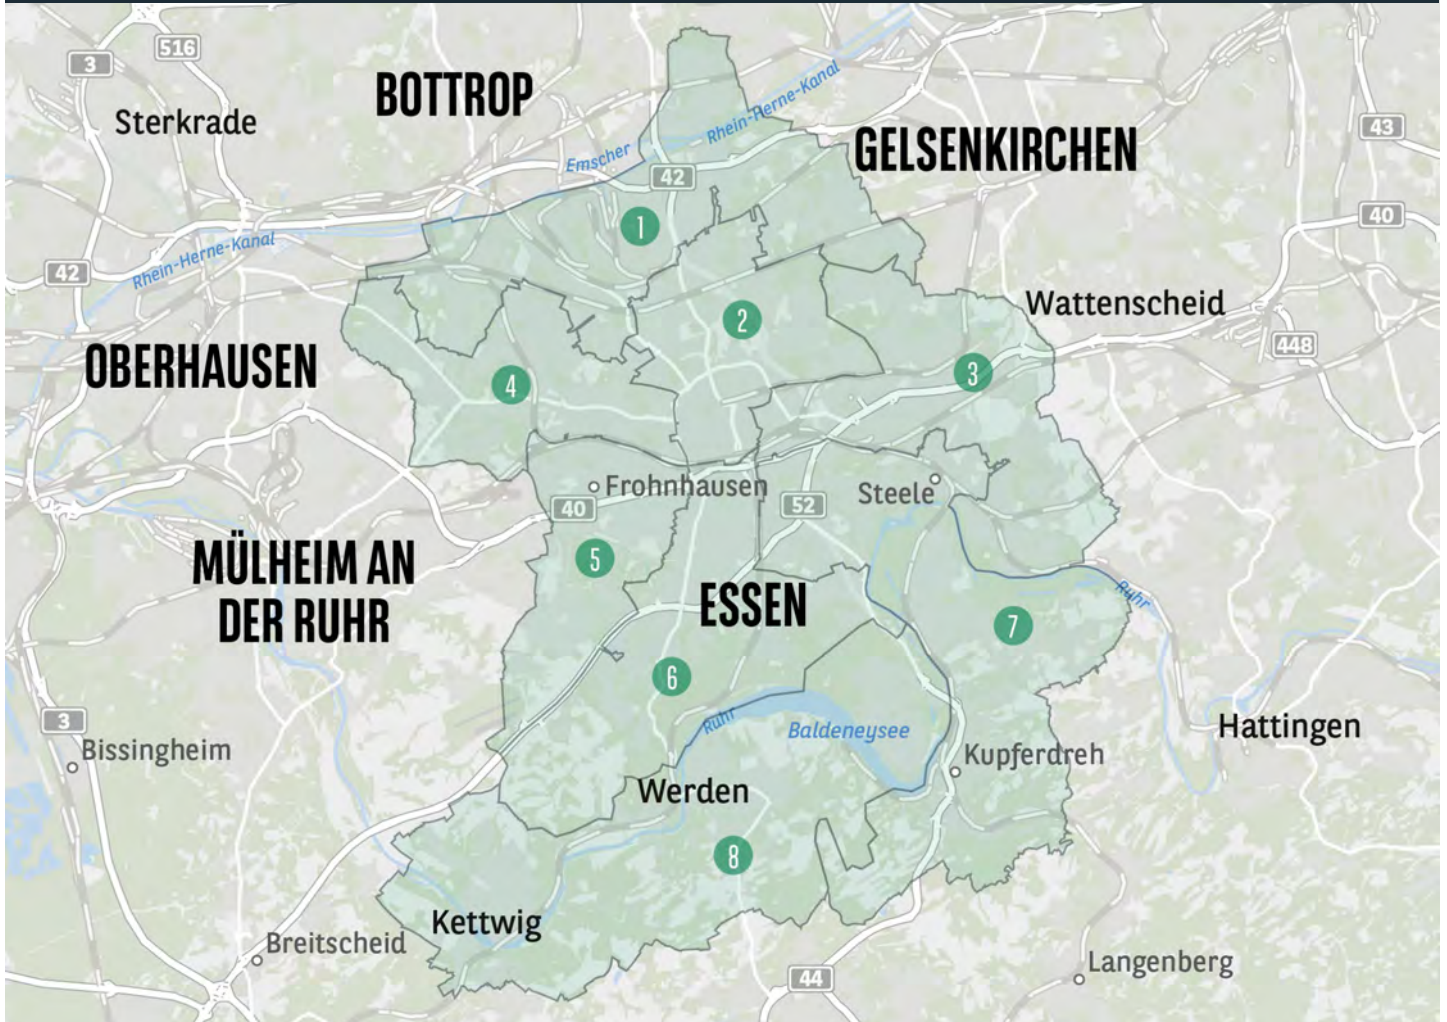

OUTLOOK

Essen is in a very good starting position to increase its importance as a business location and as a place to work and live.

Essen is home to 130 leading companies, including 10 world market leaders. The mix of global players, start-ups and a well-positioned middle class is ideal. In addition, there is a very good university scene in the region. The transformation toward a knowledge and service society has been proceeding very favourably for years. A further point in favour of Essen as a location is the comparatively low cost of housing.

Growth potential for Essen is very good and the housing market will benefit from this. In the medium and long term, prices in the Ruhr metropolis will rise sustainably and noticeably.

Vacancy rate 2019

© BNP Paribas Real Estate, March 2021; Quellen: IDN ImmoDaten GmbH; Statistisches Bundesamt; CBRE-empirica-Leerstandsindex

- Rents in existing stock of €6.80/m² offer potential for increase
- Leipzig is the only city included in the study with median rent of less than €7.00/m²

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Vacancy rate falls to 2.8 %
- Housing supply continues to decline, but is still noticeably higher than in the A-cities

© BNP Paribas Real Estate, March 2021; Source: CBRE-empirica-Leerstandsindex

- Construction activity tending upwards
- Construction activity in recent years has resulted in an average of just over 1,200 new apartments

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Calculated demand for new housing continues to be missed
- Despite increased construction activity, the deficit (2014-2020) continues to mount and stands at 28,000 units

*BNPPRE calculation based on annual net population

© BNP Paribas Real Estate, March 2021; Source: Statistisches Bundesamt

- Housing prices (new buildings) now over €4,300/m²
- By far the strongest dynamic of all the B-locations considered here, at +68 % since 2014

- New investment record of over €1.1 billion in 2020
- Average transaction volume of over half a billion euros per year since 2014

© BNP Paribas Real Estate, March 2021; Source: IDN ImmoDaten GmbH

- Prime multiplier for new construction currently at 29.0
- Multipliers for new build apartments slowly approaching the 30 mark; highest price of all B-locations

- Net prime yield approaching 3 %
- At just 3.10 %, Leipzig now has the lowest prime yield of the B-cities

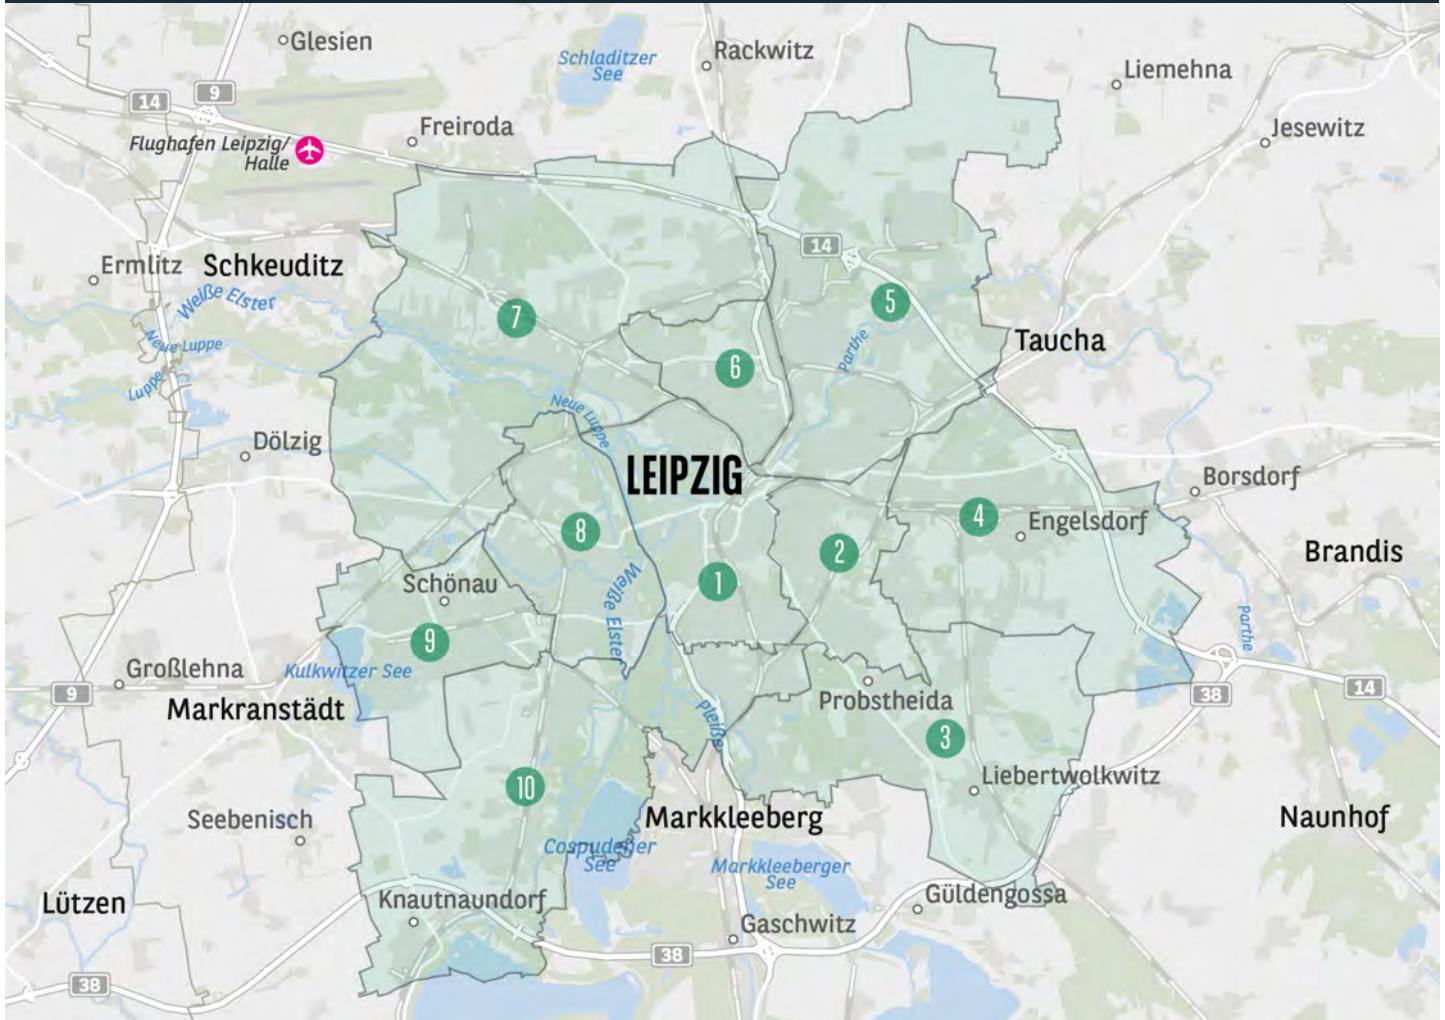

OUTLOOK

Leipzig is hip, not least reflected in its very dynamic population growth. With this in mind, the trade fair city certainly benefits from the still comparatively low level of rents. However, high demand has led to steadily falling supply and, consequently, to sharply rising rents. Nevertheless, Leipzig still has considerable potential for rent increases, higher than for most other locations.

That investors share this view is reflected in the highest purchase prices for new multi-family houses compared with other B-cities. There is much to suggest that multipliers could also reach the 30 mark in the foreseeable future.

Against this backdrop, there are many indications that an end to the recent success story is still a long way off and that Leipzig offers continued opportunities for buyers.

METHODOLOGICAL NOTES

CALCULATION OF ASKING RENTS AND PRICES

- All asking rents and prices in this report are based on own calculations from data provided by IDN ImmoDaten GmbH.
- In order to ensure the quality and consistency of the resulting values, a systematic adjustment for outliers is carried out using standard statistical methods. At the centre of this adjustment is the respective formation of a robust estimator for each data set. In individual cases, data points are interpolated for the sake of data consistency, if the number of data points required for a statistically valid calculation is not available in a specific time or space frame.
- Unless otherwise stated, the calculation of asking rents and prices includes advertisements for apartments ranging in size from 40 to 120 m².
- Where median rents and purchase prices are given, these are the median of the respective adjusted data set.
- If the upper rental and price segment is specified, this is the 90th percentile of the relevant adjusted data set.
- Despite the procedures used to adjust for statistical outliers, some cities may still report asking rents and prices that appear implausible at first glance or appear to be outliers themselves, particularly when considering the chronology (e.g. comparison of 2020 with 2019). Accordingly, external factors can be held responsible for this situation, but their effects cannot usually be clearly and categorically proven. An example is the unusual distribution of apartments on offer in the different rent price classes in Berlin in 2020. Here, it is reasonable to assume that this is not only due to a fluctuation restricted by the Corona pandemic, but also, at least in part, to political intervention in the housing market.

SIDE NOTE: BERLIN – RENTAL HOUSING ADVERTISEMENTS HALVED

- Berlin has caught up massively in recent years, so that annual growth in asking rents has often been well above that of other A-cities. In 2020, this trend appears to have intensified significantly once again: While the median rent in the other A-cities has risen by an average of around 3.5 %, the figure in Berlin is 8 %. In the upper segment, there has even been an increase of over 20 % (other A-cities: average 4 %).
- To understand why Berlin's development has been so rapid compared to the previous year, it is worth looking at the frequency distributions of listings by price segment (see graphs on the right: container width= €1/m²) in the raw data sets. It becomes exceedingly clear that there has been a massive slump in the frequency of advertisements, particularly in the lower and middle rental price classes up to around €17/m². The decline here is cumulatively about 58 % compared to 2019, while in the segments >17 €/m², on the other hand, it is only -6 %. The "collapse" of apartment availability in the lower and middle segments, accompanied by only a slight decline in supply in the upper price segments, explains the occurrence of the unusually strong average rent increase, as expensive listings are given a significantly higher weighting compared to the previous year.
- The fact that the sharp decline in listings is a peculiarity of Berlin can be seen from the fact that the (mainly Corona-related) decline in supply in the other independent cities in Germany averages only 14 %.
- The assertion that supply in Berlin's rental housing market has, on average, jumped significantly in price is therefore statistically correct. However, it should be borne in mind that this statement applies to the supply of apartments currently available and should not be interpreted to mean that all apartments have undergone a comparable price jump from the previous year. Rather, this is explained by the significantly smaller availability of apartments in the lower price segments.
